Abdulrahman Samir

Senior Frontend Engineer | Full-Stack Capable

Cairo, Egypt (UTC+2) | Open to remote | abdulrahman.aers@gmail.com

Portfolio: abdulrhmansamir3579.github.io | linkedin.com/in/abdulrahman-samir-400a401b4 | github.com/AbdulrhmanSamir3579

SUMMARY

Senior Frontend Engineer with full-stack capability: frontend architecture expertise (**Angular v8–22**, React, Next.js) and backend experience in **Node.js/NestJS** (production) and .NET Core. Domain specialist in **ERP and FinTech**, **compliance and GovTech**, and **data visualization**. Owns architecture end to end: Nx monorepos, configuration-driven workflow engines, shared component systems, engineering standards, and CI/CD. Ships bilingual Arabic/English (RTL) products for regulated and government clients.

SKILLS

Frontend: Angular (Signals, NgRx, RxJS, SSR, zoneless), TypeScript, Nx, React, Next.js, Tailwind, SCSS, ECharts, Chart.js
Backend: Node.js, NestJS, Express, Prisma, PostgreSQL, Redis, REST APIs, WebSockets, .NET Core
Testing, CI/CD & Integrations: Vitest, Jest, Playwright, GitHub Actions, Stripe, Paymob

DOMAIN EXPERTISE

ERP & Accounting: double-entry accounting, journal entries and multi-stage approvals, tax and e-invoicing, invoicing and supplier payments, procure-to-pay, payroll, trial balance and P&L, year-end closing, audit trails
Compliance & GovTech: market-entry compliance and licensing, document review workflows, government incentive programs, AI-assisted compliance reporting
Data Visualization: executive and analytics dashboards, reusable chart engines, sector and financial benchmarking
Product Architecture: configuration-driven workflow engines, dynamic forms and templates, role-based access control, bilingual Arabic/English (RTL) products

EXPERIENCE

Expanders 360 | **Senior Frontend Engineer** Jan 2026 – Present

Egypt · Five-product SaaS suite for market expansion and compliance (Comply360, Expand360, Signals360, Masar, Belvro) · Case study

- Primary frontend engineer and code owner for the suite's **Angular 22 Nx monorepo** — seven apps across five products — owning architecture, code review, and the team's engineering standards.
- Designed the **configuration-driven flow engine** behind Comply360's incorporation and compliance journeys, so new multi-step workflows ship as configuration instead of new code.
- Modernized the platform: upgraded to Angular 22 and TypeScript 6, moved every app to **zoneless** change detection with OnPush, and restructured the workspace into product-scoped libraries with enforced boundaries.
- Delivered Comply360's core product: backend-driven access control, the compliance workspace and document review, real-time notifications over Server-Sent Events, and **Stripe subscription billing** with trials, proration, and invoices.
- Codified standards — unified error handling, validation and i18n gates, about 50 architecture docs — and set up per-app CI/CD, a staging environment, and Playwright end-to-end tests.

NEXT & Associates | **Senior Frontend Engineer** Aug 2024 – Dec 2025

Cairo, Egypt · GovTech consultancy building AI-powered platforms for Saudi government clients · Case studies: Film SA, DAEM & Hwadi

- As lead frontend contributor, built the **Film SA cash-rebate platform** from an empty repository: a permission-driven, multi-stage workflow taking production-incentive applications from review and scoring to awarding and payout.
- Built analytics and AI-compliance modules for **DAEM** and **DAEM – Qiyas** (Human Resources Development Fund): sector intelligence, financial benchmarking, AI document extraction, and compliance reporting.
- Designed and built the **Hwadi** executive strategy dashboard single-handedly — chairman, CEO, CFO, and PMO views — on a reusable Chart.js visualization engine.
- Turned recurring needs — auth, interceptors, role guards, uploads, chart configuration — into shared foundations, so each new platform started from proven patterns instead of a blank repository.

ETOLV | **Frontend Developer** → **Senior Frontend Developer** Oct 2022 – Aug 2024

Giza, Egypt · Tourism ERP for travel agencies across MENA · Case study

- Built core **accounting** modules: invoicing with credit/debit notes and VAT, tax-authority e-invoicing and POS e-receipts, supplier payments with withholding tax, trial balance, profit and loss, and year-end closing.
- Built major booking-engine modules — ticketing, refunds and voids, Umrah, hotel contracts and pricing, transportation — in Arabic and English with RTL throughout.
- Migrated modules from the legacy Angular 8 portal to the new platform, retiring about 46k lines, and introduced a shared reference-data cache; promoted to Senior.

EDUCATION

Zagazig University | B.Eng., Civil Engineering 2015 – 2021
